

TECHNICAL DATA SHEET – GALVANIZED LONG LEAF HINGE

Metal Door Hinge

The metal door hinge is a robust and durable solution for closing systems in industrial doors, technical enclosures, or mechanical access points. Made of stainless steel, it offers strength, stability, and a long service life even in demanding environments.

Product Description

This metal door hinge features an offset bridge design and a flat base, making it especially suitable for installations where a firm support with stable opening is required. Its stainless steel construction ensures protection against corrosion and wear, both indoors and outdoors.

Thanks to its universal format and standard dimensions, it easily adapts to metal structures, technical doors, machinery cabinets, or industrial compartments. Its mechanical strength and ease of installation make it an excellent choice for professional applications.

- **Technical Specifications**
- **Main specifications:**
 - Type: Metal hinge with offset bridge and flat base
 - Total width: 85 mm
 - Total length: 185 mm
 - Screw hole diameter: 0.8 mm
 - Material: Stainless steel
 - High resistance to weather conditions and continuous use
 - Ideal for industrial doors, technical compartments, and machinery
 - Easy installation with standard screws
